

Annotated Equation

The diagram shows a logistic regression equation with several terms. Each term is highlighted with a colored box, and an arrow points from a descriptive label below to the corresponding term. The labels are: 'logarithm of odds of aggression' (purple), 'baseline log odds' (blue), 'physical abuse' (red), 'covariates' (teal), 'normativeness of violence' (pink), 'interaction' (dark blue), and 'country level variation in outcome' (orange).

$$\ln \left(\frac{p(\text{aggression})}{1 - p(\text{aggression})} \right) = \beta_0 + \Sigma \beta_{\text{abuse}} + \Sigma \beta_{\text{covariates}} + \Sigma \beta_{\text{normativeness}} + \Sigma \beta_{\text{abuse}} \times \text{normativeness} + u_{0j}$$
